

LINANOX 5057

Chemical name:

Benzenamine, N-phenyl-, reaction products with 2,4,4-trimethylpentene

Formula

/

Molecular Weight

393

CAS#

68411-46-1

Specification:

Appearance

Yellow liquid

Assay

≥97%

Application: > Antioxidant 5057 is a liquid aromatic amine antioxidant for processing and long-term thermal stabilization. It has low volatility and is highly efficient and prevents thermal degradation of polymers. Used in elastomers, polyolefin and polyurethane. It is used in the manufacturing of flexible polyurethane. Irganox 5057 typical dosage level is 0.1-0.4%.

Handling and Safety:

>For additional handling and toxicological information, please consult us for **Maternal Safety Date Sheet**

Package: Packed in 25kg plastic or 200kg per iron drum
